EXPERIENCE

Data Scientist ***03-2020 - Present***

ATA, LLC, The Full Stack Data Science Company

- Implemented the following analytical projects in Python:
  - Data-driven geospatial risk-analysis algorithm using Bayesian statistics
  - Suite of machine learning and statistical anomaly detection algorithms for use in streaming data systems
  - Ensemble of deep learning and classical machine learning for regression problems in logistics
  - Natural Language Processing and use of medical ontologies for text navigation
- Served as both a tech lead and team member in the design and implementation of full-stack data-intensive applications (in Clojure) to put the above data science solutions into production.
- Applied machine learning operations (MLOps) to production systems, including the development, testing, deployment, and management of model services.
- Developed RESTful APIs in Clojure for complex data integration, processing data from public and licenced datasets, storing in relational and document-oriented databases, and preparing for use by company user interfaces.
- Communicated analytical methods and results to technical and non-technical clients and stakeholders.

Research Fellow ***05-2018 - 03-2020***

National Institutes of Health, National Center for Complementary and Integrative Health *Bethesda, MD*

- Built pipelines in R and Python for analysis of behavioral and physiological data (fMRI, autonomic).
- Managed Electronic Health Records and clinical data.
- Facilitated patient visits and consulted with patients on study procedures.
- Designed data visualizations and prepared manuscripts for publication in peer reviewed journals.
- Collaborated with a diverse research team; prepared written and verbal reports for multidisciplinary audiences.
